

## What new technology did cutting tool of turning, milling have again?

"Good horse matches good saddle" well-known, the cutting tool that has been used in numerical control treatment is a crucial condition. Facing the treatment world of constant change, tool manufacturers roll out the cutting tool of innovation and solution ceaselessly. Shantewei Keleman regards the surveyor's pole of tool industry as the enterprise, new technology of what cutting tool to release of late? Understand these new technologies to conduce to the opportunity that promotes a plant machining level, introduce the new cutting tool of a few Shantewei Keleman for everybody today.

01, with Yu Gang of turning brand-new bit material qualitative GC4425 and GC4415

New generation steel qualitative GC4425 of material of turning razor blade and GC4415 brought all-around performance to promote. Hold concurrently a good tenacity and fight plasticity to be out of shape the new-style matrix of ability, offer outstanding reliability; Brand-new interrupted cutting of aftertreatment craft promotion machines function, avoid bit to rupture suddenly; Technology of coating of the 2nd acting Inveio provides steadier performance, raise wearability significantly and prolong cutting tool life; Cutting tool life is lengthened on average 25%, have height dependability and can forecast a gender, utmost reduce the waste of bit and workpiece material.

Application:

Low-alloy steel and blame alloy steel

Suit large quantities of quantities to produce

The circle is mixed outside inside round turning

Rough machining and finish machining, successive and carry interrupted cutting gently
