

Limits of the craft characteristic of the geometrical form of milling cutter and milling and application

Milling cutter

Milling cutter is cutting tool of much fine circumference, it is on the circumference face that each tooth is equivalent to securing lathe tool in milling cutter. The cutting blade that cutting attends at the same time when milling is longer, and without idle stroke, vc is taller also, productivity is so taller. Milling cutter is a lot of more phyletic, the structure is differ, applied range is very wide, by its utility can be divided to machine plane to use milling cutter, treatment groove uses face of figuration of milling cutter, treatment to wait for 3 kinds big with milling cutter.

Milling cutter type

Milling cutter of face of columnar milling cutter saber saw of 3 blade mill piece milling cutter establishes milling cutter

Keyway milling cutter points to milling cutter of figuration of milling cutter of angle of shape milling cutter
