

Miniature milling cutter is machined, rotate speed is insufficient, can add outfit NAKANISHI increases fast knife handle

Machining center dispute often suits the equipment that needs to raise the rotate speed of the cutter machines, and the rotate speed ability that should undertake in machining center treatment of miniature mill cutter needs to raise machining center cutting tool comes how does machining center rotate speed increase rotate Chun Heng tool is recommended outfit NAKANISHI is added to increase fast knife handle in CNC machining center.

Through above test data can get: Outfit NAKANISHI is added to fast knife handle to be able to raise the rotate speed limit of machine equipment itself directly on equipment of machining center machine, get rapidded treatment rate that increase cutting tool rotate speed, implementation miniature milling cutter machines a function, raise the utilization rate of machining center, realize treatment of tall accurate milling
