

How to choose milling cutter blade to count / # knowledge shares # nicety treatmentaa

How to choose milling cutter blade to count? Establish milling cutter commonly usedly to have Chan Ren, Shuang Ren, 3 blade, 4 blade, 5 blade, 6 blade. Chan Ren establishes milling cutter to apply to treatment aluminium alloy and Yakeli material. Double blade milling cutter applies to groovy mill, basically use at rough machining. 3 blade milling cutter applies to aluminium alloy treatment, the effect that discharge bits is good, point is sharp. Tigheidity of 4 blade milling cutter is better, suit face mill, side mill, finish machining, can use at processing all sorts of data, like cast, steel wait with stainless steel. 5 blade basically are used at material of difficult treatment of finish machining and treatment with blade, wait like high temperature alloy, titanium alloy. The blade number of milling cutter is less, the space that hold bit is larger, tigheidity is poorer; Blade number is more, the effect that discharge bits is poorer, dan Gang sex is better. Accordingly, we need to choose suitable milling cutter according to processing condition and treatment data. Pay close attention to me, understand knowledge o more cutting tool! Surmount machinery.
