The distinction of milling cutter ofhigh-speed steel milling cutter and hard alloy wolfram steelaa

The distinction of high-speed steel milling cutter andmilling cutter of hard alloy wolfram steel

Above all milling cutter of wolfram steel of the hardalloy on hardness is a lot of taller.

High-speed steel knife knife of renown Bai Gang,characteristic of high-speed steel knife: Cheap, tenacity is good, but strong hardness is not quite tall,let a knife easily, and wearability, hot rigid is opposite for poorer, the hot rigid of high-speed steelmilling cutter is controlled 600 degrees, hardness 65HRC is controlled, should use high-speed steelmill apparently harder data when, if cooling fluid does not reach the designated position burn a knifevery easily this heats up one of reasons with not tallrigid namely.

Hard alloy milling cutter milling cutter of renownwolfram steel, wolfram steel milling cutter occupies especially: Hot rigid is good, wear-resisting, tenacityis good, but anti-impact properties is poor, throw edge to be able to break casually, hard alloy is thematerial that becomes with the honest legal systemof pulverous metallurgy, hardness can amount to90HRA left and right sides, hot sex sex can amountto 900-1000 to spend the left and right sides. A lot ofkinds also are divided on the material of wolframsteel at the same time, the material on market is atpresent qualitative better Taiwan Chun Bao expects,german cobalt is gotten makings. However also a lotof extruding expect, undertake extruding throughwolfram steel flotsam and material.

Say popularly, it is the distinction of costeffectiveness. White steel knife points to high-speedsteel cutting tool mostly, high-speed steel (thematerial with the commonnest HSS - HIGH SPEEDSTEEL) is SKH9, sclerotic heat treatment iscontrolled to HRC64. Cost relatively wolfram steelcutting tool is low, by the hardness of cuttingworkpiece inferior also, it is the most traditionalcutting tool. Wolfram steel lathe tool has thehardness of HRA90-93, have cutting power moreforcedly than high-speed steel cutting tool more,service life is longer, more expensive also of course.
