

Float boring cutter | Boring cutter series

Float boring cutter Use at machining precision to ask Gao aperture with longer diameter, apply to accurate machine make commonly, the domain such as car and aviation can be in do not damage the circumstance of aperture fa assure the diameter of aperture, circularity and exterior q through tiny adjustment, achieve taller treatment precision efficiency thereby.

Float boring cutter

Characteristic

(1) treatment quality is in high as a result of boring razor the float in machining a process, can compensate boring mounting error and boring cutter arbor to slant the undes effect that places place to cause, raise the precision of ap As a result of Xiu Guangren is wider, the effect repairing hole wall is consequently good, reduced exterior surface roughness to be worth. But because boring cutter is float reason cannot axes of corrective former poriferous deflec position error.

(Taller float razor blade has 2) productivity two advocate blade at the same time cutting, and operate handy, can in productivity so.

(Cost of 3) cutting tool is onlier blade boring knife up bec piece the structure is more complex than odd blade borin and blade worries a demand tall, reason cost is higher.
