

Reclaim should wolfram steel milling cutter notice what and wolfram steel are new reclaim the price?aa

Have today prentice took milling cutter of a bag of wolfram steel we will look. This broach returns pretty it seems that new likelihood is manufacturer the demand is higher, edge has breach to become invalid. Wolfram steel milling cutter is a cutting tool that makes with wolfram steel hard alloy. Basic use at sculpture of numerical control machining center, CNC commonly. If be the personnel inside travel, looking to know knives is used where, milling cutter of this bag of wolfram steel to be used on average milling machine commonly, machine harder not complex heat treatment material. Application of wolfram steel milling cutter is wide, still a kind of edge coating small application to be on circuit board.

When we use milling cutter at ordinary times, should want to solve two problems, one is technical issue, need the master's rich experience, debug ceaselessly, wear away with respect to time, can know how to can reduce cutting tool slowly; The 2nd is to choose what kind of milling cutter namely, tenacity is tall, heatproof, crackle sensitivity is small, and the bit stuff that has better wear resistance and wearability. If can choose the razor blade, the homebred Y series to general milling, if the demand is high, below more delicate situation, euramerican razor blade is better to serve as first selection, of course the price is exceedingly expensive also.
