Flying knife is comprised by a main body, inserted among them or two knives head. As the whirl of knife head, knife head can undertake narrower or wider cutting. Face milling cutter is more general below all sorts of circumstances, but their price is expensive, and the treatment content that these flying knives also can finish face milling cutter, the price is very cheap, but in cutting efficiency respect far under face milling cutter.

The principle that milling cutter chooses

The choice of diameter of 1 milling cutter

Because the product differs with what produce batch and the choice of milling cutter diameter has very big difference. The choice of cutting tool diameter basically depends on the treatment dimension of the norms of equipment and workpiece.
