

Miniature milling cutter is machined, rotate speed is insufficient, can add outfit NAKANISHI increases fast knife handle

Machining center dispute often suits the equipment that milling cutter machines, and the rotate speed ability that should undertake in machining center treatment of miniature milling cutter needs to raise machining center cutting tool comes true, how does machining center rotate speed increase rotate speed? Chun Heng tool is recommended outfit NAKANISHI is added to increase fast knife handle in CNC machining center.

### [China End Mills / End Milling Cutter](#)

Through above test data can get: Outfit NAKANISHI is added to add fast knife handle to be able to raise the rotate speed upper limit of machine equipment itself directly on equipment of machining center machine, get rapidder treatment rate thereby, increase cutting tool rotate speed, implementation miniature milling cutter machines a function, raise the utilization rate of machining center, realize treatment of tall accurate milling.
