

Milling cutter of numerical control of C machining center is chosen completely graphic, intellectual drop is too overall

Everybody is good, I am to often be installed.

What is milling? Milling is a kind of treatment method that classification excising to the metal through motion. It does whirling, and normally workpiece and cutting tool do opposite linear feed (workpiece is below most circumstances along with workbench feed). Below certain circumstances workpiece keeps fixed, and gyral cutting tool does transverse linear feed. Milling cutting tool has a few can successively to measure the cutting blade of material certainly. Become more cutting blade cut material at the same time, cutting certain deepness in workpiece admirably material. Graph 1 treatment sketch map of all sorts of milling cutter.
