## willing culter diameter now are youchosenraa

Milling cutter diameter how are you chosen?

Of milling cutter diameter choose the different difference thatlooks product and production lot bigger, of cutting tool diameterchoose basically depend on thetreatment dimension of thenorms of equipment and workpiece.

One, face milling cutter

The element of a few gist that diameter of planar milling cutterchooses

Place of 1. planar milling cutter needs power to should be inlimits of machine tool power.

Diameter of 2. planar milling cutter can be main shaft diameter 1.5 times (regard chosen basis as diameter of machine tool mainshaft).

The 1.6-2 that diameter of 3. planar milling cutter can beworkpiece cutting width times.

2, establish milling cutter

Establish the element of a few gist that milling cutter diameterchooses

- 1. establishs the choice of milling cutter diameter to basicallyshould consider workpiece to machine the requirement of dimension, cannot interference phenomenon appears.
- 2. establishs milling cutter place to need power to should be inlimits of machine tool power.

The highest revolution that 3. establishs the choice of millingcutter diameter to basically consider a machine tool whether thelowermost cutting rate that achieves cutting tool (60m/min).
