

## Miniature milling cutter is machined, rotate speed is insufficient, can add outfit NAKANISHI increases fast knife handle

Machining center dispute often suits the equipment that rotate speed is insufficient, can add outfit NAKANISHI increases fast knife handle in CNC machining center. Machining center dispute often suits the equipment that rotate speed is insufficient, can add outfit NAKANISHI increases fast knife handle in CNC machining center. Machining center dispute often suits the equipment that rotate speed is insufficient, can add outfit NAKANISHI increases fast knife handle in CNC machining center. Machining center dispute often suits the equipment that rotate speed is insufficient, can add outfit NAKANISHI increases fast knife handle in CNC machining center.

Through above test data can get: Outfit NAKANISHI is added fast knife handle to be able to raise the rotate speed limit of machine equipment itself directly on equipment of machining center machine, get rapidder treatment rate through increase cutting tool rotate speed, implementation miniature milling cutter machines a function, raise the utilization rate of machining center, realize treatment of tall accurate milling
